

# ENERGY ENVIROMONITOR® STATION, Standard

7460  
STATIONS

The Energy EnviroMonitor station comprises two components: the Sensor Interface Module (SIM), to which all external sensors are connected, and the console, which performs A/D conversion, calculations, and display of data. A DC-power adapter and 8' (2.4 m) standard 8-conductor cable (for connecting the SIM to the console) are also included. The Energy WeatherLink may be added to the station for data logging and communication with a computer. Variations in system configuration and interconnection are discussed in Application Note 1, "System Configurations, Standard Stations".
